

# CmpE 321 Project 4 Individual Contribution

Dağhan Erdönmez 2021400093 Group 20

June 2025

## 1 Tasks & Contribution

My teammate did the design part mostly based on our discussions beforehand. He also wrote the base implementation in code. I've added the paging mechanism and record management system by writing the corresponding classes in code. I also wrote the design part of the report.

## 2 Collaboration & Challenges

Throughout the project, we tried to divide the tasks fairly and kept each other updated during the process. Sometimes our schedules didn't match perfectly, which made coordination a bit tricky, but we managed to stay on track through comments on GitHub. One challenge I personally faced was understanding how our individual parts would come together as a full system. It took some effort to make sure everything worked smoothly when integrated.

## 3 Self Assessment

This project pushed me to think more practically about the theory we learned. I noticed that writing actual code for database structures required more attention to detail than I expected. There were moments I felt stuck, but figuring things out step by step helped me gain more confidence. Overall, it was a valuable experience that made the course topics more meaningful and real for me.
